

Asim Imtiaz

Senior SW Engineer

Data Engineer with strong foundations in full-stack development and hands-on experience building and migrating large-scale data platforms. Proven expertise in data migration and transformation, including designing and implementing Airflow DAGs, converting legacy Scala/JAR-based pipelines into PySpark, and processing batch and streaming data from CSV, Parquet, JSON, and API sources.

Education

- Masters in Global IT Management (Work Informatics), University of Turku, Finland
- Bachelor in Software Engineering, International Islamic University, Islamabad, Pakistan
- Diploma in Big Data Analytics, Arcada University, Helsinki, Finland

Certifications

- Microsoft Certified: Azure Developer Associate (AZ-204)
- Microsoft Certified: Azure Fundamentals
- Microsoft Certified: Azure Data Fundamentals
- AWS Certified Cloud Practitioner - Foundational

Courses

- Microsoft Fabric Data Engineering
- Microsoft Azure DevOps

Highlighted roles

- Full Stack Developer
- Senior Software Engineer
- Data Engineer
- Mobile Developer

Languages

- English
- Finnish

Experienced in data lake architectures, migrating data from HDFS to AWS S3, ingesting and managing datasets in Apache Iceberg tables, and integrating pipelines end-to-end from raw ingestion to curated datasets. Skilled in PySpark, Python, SQL, and distributed data processing, with a strong understanding of data modeling, performance optimization, and reliability in production environments.

Completed instructor-led training in Microsoft Fabric, strengthening expertise in modern analytics platforms and cloud-native data solutions. Brings an engineering mindset shaped by years of full-stack development, enabling effective collaboration across data, backend, and product teams. Comfortable working in agile environments and owning complex data workflows from design to production.

AREAS OF EXPERTISE

Microsoft Fabric (Instructor-Led Training)

ETL / ELT Pipelines

DAG Design & Implementation

Apache Airflow

Apache Spark / PySpark

Apache Iceberg

HDFS to Cloud Migration

Data Lake Architecture

Batch & Streaming Data Pipelines

Data Engineering & Data Platform Design

ASSIGNMENTS

Data Migration

Customer: TELIA FINLAND
Duration: Jul 2025 - till now
Roles: Data Engineer

PySpark Apache Airflow Apache Hadoop S3 (Simple Storage Service) Iceberg Parquet Git

Lifecare AI Assistant is an AI-powered chatbot that integrates with the Lifecare system, offering real-time, conversational access to patient data and system insights through an intuitive interface.

Role in the project - Data Engineer:

Customer Context:

Telia Finland operates multiple critical data ingestion pipelines supporting telecom, network, and operational analytics. These pipelines include high-throughput IME stream datasets, MFT-based file transfers, and API-based integrations. The existing Hadoop (HDFS)-centric architecture faced scalability, storage, and operational challenges, particularly for terabyte-scale historical data and complex partition structures. The migration aimed to improve reliability, scalability, and long-term maintainability while minimizing production disruption.

My Roles and Responsibilities:

Led the end-to-end migration of IME stream datasets, MFT-based datasets, and API-driven data pipelines from HDFS and external sources into S3 and Apache Iceberg.

Designed and implemented a chunk-based HDFS-to-S3 copy strategy to safely migrate very large datasets without relying on local temporary storage.

Built and managed Iceberg tables with wide schemas (200+ columns), handling schema alignment, missing columns, and data type inconsistencies during ingestion.

Developed and optimized Spark-based ingestion workflows, resolving repeated OOM kills and Kubernetes pod failures by introducing controlled, file-by-file ingestion.

Implemented robust handling for corrupt, non-Parquet, and mixed-format files, ensuring ingestion stability and failure isolation.

Orchestrated ingestion pipelines using Apache Airflow, enabling reliable scheduling, monitoring, alerting, and safe re-runs.

Performed detailed data validation and reconciliation, comparing record counts across HDFS, S3 landing zones, and Iceberg tables to guarantee data correctness.

Collaborated closely with platform, infrastructure, and operations teams to stabilize production pipelines and align ingestion patterns with platform standards.

Value Delivered:

Successfully migrated terabytes of critical telecom data into a modern, scalable Iceberg-based data platform.

Enabled reliable and restart-safe ingestion for complex, high-volume datasets that could not be handled by standard migration approaches.

Improved pipeline stability by eliminating recurring memory failures and reducing operational intervention during large-scale ingestions.

Established a repeatable migration and ingestion framework applicable across streaming, file-based, and API-driven datasets.

Strengthened data platform reliability and future scalability while minimizing downtime and risk to business-critical analytics workflows.

Lifecare AI Project

Customer: TietoEvy Care
Duration: Sep 2025 - till now
Roles: AI Frontend Developer

Lifecare AI Assistant is an AI-powered chatbot that integrates with the Lifecare system, offering real-time, conversational access to patient data and system insights through an intuitive interface.

Role in the project - AI Frontend Developer:

Customer Context:
Lifecare is a widely adopted healthcare system used by medical institutions to manage patient records and clinical data. The AI Assistant enhances accessibility, enabling healthcare professionals to quickly retrieve patient information and relevant insights from the vast data repository.

My Roles and Responsibilities:
Served as a Frontend Developer, implementing the AngularJS interface for the AI Assistant.
Utilized Angular Store, SignalR, and other technologies to enable real-time data updates and state management.
Collaborated with backend and AI teams to ensure seamless data flow between the chatbot, UI, and Lifecare system.
Contributed to the architecture and performance optimisation of a responsive and secure frontend application.

Value Delivered:
Delivered a user-friendly interface that improved the speed and efficiency of patient data access for healthcare staff.
Enhanced clinical workflows by integrating real-time updates and conversational AI capabilities into Lifecare’s ecosystem.
Increased the system’s usability and accessibility without requiring major changes to existing healthcare infrastructure.

TMS Queue System

Customer:

TietoEvy

Duration:

Mar 2025 - Jul 2025

Roles:

Senior Software Engineer

- Jira
- GitHub
- Spring Boot
- Keycloak
- Angular 18
- Docker
- JSON Server

The TMS Queue System was developed to streamline customer service management by allowing clients to obtain queues while enabling internal employees to adjust and manage them in real-time. Unlike traditional queue systems, this solution introduced dynamic queue handling and time optimization, improving efficiency for both service providers and end customers.

Role in the project - Senior Software Engineer:

Customer Context:
Implemented for the banking sector in Finland, where efficient time and queue management is critical to ensuring smooth operations and enhanced customer satisfaction.

My Role and Responsibilities:
Integrated Keycloak authentication into the Spring Boot backend for secure access control.
Developed frontend features in Angular 18, delivering a modern and responsive user experience.
Built and connected APIs between backend and frontend to enable seamless real-time queue management.

Value Delivered:
Delivered a secure, scalable, and user-friendly queue management system that improved both customer experience and employee efficiency. Enabled real-time queue adjustments, helping banks reduce waiting times and optimize service delivery.

Video Archive Solution

Customer:

TietoEvy

Duration:

Mar 2024 - Mar 2025

Roles:

Software Architect

AWS

Docker

Maven

Postman

Node.js

Keycloak

Draw.io

SAFe (Scaled Agile Framework)

Angular

Jira

Confluence

Scrum Master

Developed as part of a broader Smart Scheduling and Video Meeting platform, the Video Archive Solution enables the secure recording, storage, and playback of video meetings. It ensures long-term accessibility of meeting data while complying with regulatory and business requirements.

Role in the project - Software Architect:

Customer Context:

The solution is primarily used by banking and financial institutions, requiring strict compliance with data security and retention standards.

My Role and Responsibilities:

- Led the end-to-end development and delivery of the Video Archive Solution.
- Owned the product roadmap and ensured alignment with business goals and compliance needs.
- Prioritised and maintained the feature backlog to support agile development and timely releases.
- Collaborated with Customer Success Managers to gather requirements and validate feature implementations.
- Led third-party vendor integration with Vonage Cloud for storage and playback capabilities.
- Automated technical processes to streamline development and deployment workflows.
- Conducted release planning, demos, and roadmap presentations for internal and external stakeholders.

Value Delivered:

- Delivered a compliant and reliable archiving system trusted by banking clients.
- Improved team efficiency through process automation and optimised workflows.
- Ensured on-time delivery of features through structured backlog and roadmap management.
- Strengthened customer satisfaction by directly incorporating feedback and delivering critical features aligned with regulatory demands.

Kela Archiving Solution

Customer:

Duration:

Roles:

Kela

Nov 2023 - Oct 2024

Senior Software Engineer

Node.js

Express.js

TypeScript

MS SQL Server

Azure

Genesys

Keycloak

REST API

AWS S3

Angular

Authentication & Authorisation

The Archiving Solution was developed to enable the efficient storage, management, and retrieval of media files and their associated metadata. Designed to integrate multiple data sources and systems, the solution ensures that Kela can securely manage high volumes of video and audio content while maintaining compliance with national data protection standards.

Role in the project - Senior Software Engineer:

Customer Context:

Kela (The Social Insurance Institution of Finland) is one of the country’s largest public organizations, responsible for managing the national social security system. Serving millions of citizens, Kela handles vast volumes of sensitive data and media content daily, requiring highly reliable, secure, and scalable digital archiving solutions.

My Role and Responsibilities:

- Acted as the lead backend developer and primary system architect for the archiving solution.
- Designed and implemented a Node.js + TypeScript backend application capable of integrating multiple data sources, including MSSQL Database, AWS S3, Genesys, and Keycloak.
- Developed RESTful APIs consumed by the Angular frontend, ensuring smooth user interaction and real-time access to archived content.

Built secure authentication and role-based access using Keycloak.
Automated metadata extraction and media file management for efficient backend operations.
Ensured seamless data communication and synchronization between third-party systems and internal services.
Collaborated closely with frontend developers and other stakeholders for feature alignment and performance optimization.

Value Delivered:
Delivered a production-grade archiving backend that handles large-scale data and media workloads reliably and securely.
Greatly improved data accessibility and operational efficiency through system automation and tight integrations.
Enabled secure access control using Keycloak, supporting compliance with stringent privacy regulations.
Played a critical role in modernizing Kela’s digital infrastructure for media archiving, contributing directly to improved service delivery for Finnish citizens.

Plandent Web Portal

Customer: PLANDENT FINLAND
Duration: Jun 2023 - Nov 2023
Roles: Senior Software Developer

Vue.js	vuex store	grunt	SCSS	Azure DevOps	inRiver PIM	ekara	Optimizely CMS	TypeScript
JavaScript	.NET Framework	REST API	CI/CD	Authentication & Authorisation	Jira	Confluence		

The project involved building a non-public B2B web application designed to support dental professionals with product search, ordering, and editorial content management. The platform features deep system integrations, role-based access, and a responsive, seamless user experience tailored to industry-specific workflows.

Plandent Oy – <https://www.plandent.fi/>

Role in the project - Senior Software Developer:

Customer Context:
Plandent Oy is one of Finland’s leading dental supply companies, serving dental professionals and clinics across the country. As a major player in the healthcare B2B market, Plandent requires robust and secure digital platforms to streamline product browsing, ordering, and content management for professional users.

My Role and Responsibilities:
Worked as a Full Stack Developer across both frontend and backend layers.
Developed responsive and dynamic UI components using Vue.js, Vue Store, TypeScript, and SCSS.
Maintained and optimized the frontend build pipeline with Grunt for efficient deployments.
Built backend services and RESTful APIs using the .NET Framework to support frontend features and third-party systems.
Integrated external systems such as Ekara and inRiver for real-time product information synchronization.
Customized Optimizely CMS to support structured content workflows for editorial users.
Managed secure authentication and role-based authorization across the platform.
Designed middleware for seamless backend-to-third-party API communication.
Maintained CI/CD pipelines and release workflows using Azure DevOps.
Actively participated in Agile ceremonies, documentation (Confluence), and task tracking (Jira).

Value Delivered:
Delivered scalable, secure, and user-friendly features that enhanced the ordering and content management experience for dental professionals.
Streamlined product data updates through automated integration with external systems.
Reduced development bottlenecks and improved deployment speed by managing CI/CD pipelines.
Played a critical role in delivering a maintainable and performant system that meets the operational needs of a leading healthcare supplier.

Renewal of valmet.com

Customer: VALMET

Duration: Oct 2022 - till now
Roles: Senior Software Developer

HTML5 JavaScript jQuery Optimizely CMS Episerver TypeScript Vue.js .NET Framework Webpack
SCSS API Integration Frontend Architecture

The project involved a full-scale renewal of valmet.com, aimed at enhancing user experience, aligning with updated branding, and enabling dynamic content delivery through Optimizely CMS. The solution required performance optimization, modern frontend architecture, and strong backend integration to ensure content flexibility and scalability.

Role in the project - Senior Software Developer:

Customer Context:

Valmet Oyj is a global developer and supplier of technologies, automation, and services for the pulp, paper, and energy industries. With a global customer base, their public-facing website plays a key role in communication, brand presence, and business engagement.

My Role and Responsibilities:

Acted as a Full Stack Developer with a strong focus on frontend tasks.

Led template development using Razor views within the .NET Framework for consistent UI and streamlined content rendering.

Configured Webpack for optimized bundling and improved site performance.

Refactored and modularized JavaScript, Vue.js components, and stylesheets to improve maintainability and performance.

Integrated Optimizely CMS with the frontend to enable dynamic content updates, personalization, and A/B testing.

Developed backend functionality using Optimizely APIs and exposed REST endpoints for frontend consumption.

Value Delivered:

Delivered a modernized, high-performing website aligned with Valmet's brand identity and global communication goals.

Improved maintainability, scalability, and responsiveness of the frontend architecture.

Enabled marketing and content teams to dynamically manage and personalize content without developer dependency.

Strengthened system flexibility through well-structured backend APIs supporting frontend needs.

Tuska 2022

Customer: Tuska
Duration: Jan 2022 - Jun 2022
Roles: Senior Software Developer

React Native JavaScript Contentful CMS Headless CMS Expo client Mobile Application Architecture
Agile Development

The project aimed to deliver a robust and intuitive native mobile application to serve as the official digital companion for festival attendees. The app provided real-time updates, artist schedules, venue maps, and announcements, all backed by a scalable content management setup to support high user traffic during the festival.

Role in the project - Senior Software Developer:

Customer Context:

Tuska Open Air Metal Festival is Finland's largest and most renowned heavy metal music festival, attracting tens of thousands of attendees annually from across Europe and beyond. The event is a multi-day experience with live performances, merchandise, food services, and multiple stages, requiring real-time updates and high audience engagement.

My Role and Responsibilities:

Served as the Full Stack Mobile Developer responsible for leading the development and architecture of the mobile application.

Built the mobile app using React Native, delivering a high-performing, cross-platform experience for iOS and Android. Integrated Contentful as the headless CMS to allow organizers to manage and update festival content dynamically, including schedules, artist profiles, and live announcements. Collaborated closely with festival stakeholders to gather requirements and deliver features tailored to attendee needs and festival operations.

Value Delivered:
Delivered a seamless mobile experience that enhanced attendee engagement and reduced dependency on printed materials.
Enabled real-time content updates, ensuring timely communication and agility during live event operations.
Created a scalable and reusable app architecture to support future editions of the festival.
Strengthened the digital presence of Tuska Festival, aligning the tech experience with its growing international reputation.

IDigi development

Customer:

ILMARINEN

Duration:

Jul 2021 - Nov 2022

Roles:

Senior Software Developer

React	Redux	Web UI, Bootstrap	REST API	Confluence	GitHub	Episerver	Google Cloud Platform
Jenkins	Optimizely CMS	TypeScript	IAM	Jira			

The project involved modernizing and architecting Ilmarinen’s web-based customer-facing platform, ensuring scalability, performance, and alignment with design and accessibility standards. The application facilitates self-service functionalities for insured individuals and employers while integrating securely with backend services and internal data systems.

Role in the project - Senior Software Developer:
Customer Context:
Ilmarinen Mutual Pension Insurance Company is one of Finland’s largest earnings-related pension insurers. It is responsible for managing the statutory pension cover (YEL and TyEL) for employees and entrepreneurs across the country. Ilmarinen serves hundreds of thousands of customers and processes large volumes of sensitive employment and pension data daily, making digital reliability and usability essential.

My Role and Responsibilities:
Spearheaded the frontend architecture design, aligning technical implementation with Ilmarinen’s brand and user experience goals.
Actively collaborated with UI/UX teams and product stakeholders to clarify requirements and ensure pixel-perfect implementation.
Worked alongside the testing team to identify edge cases and guarantee stability across releases.
Built dynamic and responsive UIs using ReactJS, Redux, and Bootstrap, while handling secure data transactions via REST APIs.
Integrated with Episerver (Optimizely CMS) to support flexible and dynamic content management.
Maintained code quality and delivery reliability by leveraging Jenkins, GitHub, and Google Cloud services in a CI/CD pipeline.
Participated in sprint ceremonies and cross-team collaboration using Jira and Confluence.

Value Delivered:
Delivered a robust, modular frontend foundation that supports future feature scaling and maintenance.
Improved team velocity and coordination by establishing clear development patterns and architecture documentation.
Strengthened user experience and accessibility compliance, essential for Ilmarinen’s broad and diverse user base.
Enabled faster and more stable deployments through an optimized continuous delivery pipeline integrated with automated testing and cloud services.

Kesko Telesales Renewal

Customer:

KESKO

Duration:

Oct 2020 - Jun 2021

Roles: Senior Software Developer

Redux React Confluence Cascading Style Sheets (CSS) Jira GitHub Azure Functions Azure DevOps
Node.js Salesforce Integrations

The solution was a Single Page Application (SPA) designed to manage and streamline internal order entry and fulfillment processes. The application provided a rich, interactive UI with real-time updates and integrations with Salesforce for customer and order data. It was deployed on Microsoft Azure, ensuring scalability and high availability for Kesko's internal operations.

Role in the project - Senior Software Developer:

Customer Context:

Kesko Corporation is one of Finland's largest listed companies and a leading provider of retail services across the grocery trade, building and technical trade, and car trade sectors. Operating under brands like K-Citymarket, K-Supermarket, and K-Rauta, Kesko manages vast supply chains and supports thousands of employees across Finland and Northern Europe. This project was focused on building an internal tool used by Kesko's personnel to streamline and accelerate order management operations—a mission-critical system that directly supports daily business activities in retail and logistics.

My Role and Responsibilities:

Led the frontend development of the SPA using ReactJS and Redux, focusing on complex user interactions and data-driven UI logic.

Developed real-time features and keyboard shortcut functionalities to boost user productivity and reduce time spent on repetitive tasks.

Designed state management patterns with Redux to ensure application data consistency across different views and components.

Built and integrated API endpoints using Microsoft Azure Function Apps to interact securely and efficiently with Salesforce.

Collaborated with the backend and DevOps teams to align on deployment pipelines and Azure infrastructure setup.

Used Azure DevOps for managing CI/CD, code reviews, builds, and task tracking across the development lifecycle.

Maintained clean and scalable code using Git for version control and team collaboration.

Value Delivered:

Delivered a high-performance internal application that significantly improved the speed and accuracy of order management tasks for Kesko employees.

Reduced operational friction by implementing user-friendly UI features tailored for high-frequency tasks and enterprise workflows.

Enhanced internal team collaboration and deployment reliability by establishing clear processes and leveraging Azure DevOps.

Ensured seamless data synchronization with Salesforce, eliminating manual work and minimizing errors in the order lifecycle.

HSE mobile application

Customer: Neles

Duration: May 2020 - Jul 2020

Roles: Senior Software Developer

Android Studio iOS Application Development Cordova JavaScript Legacy Code Maintenance
Cross Platform Development Agile Development

The project focused on enhancing an existing Cordova-based cross-platform mobile application used internally by Neles personnel. The app, available on both Android and iOS, supported tasks such as monitoring valve statuses, capturing data on the field, and providing real-time updates to the central system.

Role in the project - Senior Software Developer:

Customer Context:

Neles, now part of Valmet, is a globally recognized industrial flow control solutions provider serving sectors like oil and gas, pulp and paper, chemicals, and other process industries. With operations in over 40 countries, Neles products are mission-critical in ensuring the safety, efficiency, and reliability of complex process environments. Their mobile applications help internal teams and field engineers manage, monitor, and maintain flow control devices efficiently.

My Role and Responsibilities:

Contributed to feature enhancements in the legacy Cordova codebase, ensuring backward compatibility while improving performance and usability.

Implemented new modules and user-facing features without introducing regressions, maintaining overall application stability.

Collaborated with the team to analyze technical debt and identify opportunities for scalable improvements despite the legacy framework.

Participated in regular code reviews and ensured alignment with project goals and development best practices.

Value Delivered:

Enabled continued functionality and modernization of a critical field service app without disrupting existing operations. Improved user experience and productivity for field engineers by adding essential features and performance improvements.

Contributed to the long-term maintainability of the legacy system, delaying the need for a complete rewrite while still meeting business needs.

HSE mobile App

Customer: METSO OUTOTEC
Duration: May 2020 - Jul 2020
Roles: Senior Software Developer

- Cordova
- Android Studio
- iOS Application Development
- JavaScript
- Legacy Code Maintenance
- Cross Platform Development
- Agile Development

The project involved enhancing an existing Cordova-based cross-platform mobile application used by Metso Outotec's field operators and technicians. The app runs on both Android and iOS devices and supports critical operational tasks like equipment monitoring, data collection, and real-time reporting.

Role in the project - Senior Software Developer:

Customer Context:

Metso Outotec is a global leader in sustainable technologies, end-to-end solutions, and services for the minerals, metals, and recycling industries. The company delivers process expertise and digitalization to optimize operations and improve environmental impact in sectors worldwide.

My Role and Responsibilities:

Improved and extended the legacy Cordova mobile app by delivering new, user-focused features without compromising existing stability or user experience.

Collaborated closely with the development team to align updates with project objectives and ensure that enhancements were scalable and maintainable.

Followed best coding practices and participated in code reviews to uphold high-quality standards across the evolving codebase.

Value Delivered:

Ensured seamless continuation and modernization of a critical mobile tool supporting field operations.

Enhanced operational efficiency by integrating features that improved data accuracy and usability in challenging environments.

Helped maintain a stable, scalable application environment despite working within a legacy framework.

Metso equipment

Customer: METSO OUTOTEC
Duration: May 2020 - Jul 2020
Roles: Senior Software Developer

AngularJS Redux GitHub Node.js CI/CD JavaScript JSON Server Legacy Code Maintenance
Cloud deployment Agile Development

The project focused on enhancing an established AngularJS frontend application used internally by Metso Outotec. The application facilitates various business processes and requires continuous feature updates to adapt to evolving operational needs.

Role in the project - Senior Software Developer:

Customer Context:

Metso Outotec is a global industrial technology leader providing sustainable solutions for minerals processing, metals refining, and recycling industries. Their digital tools support complex operational processes critical for safety and efficiency.

My Role and Responsibilities:

Contributed as a Frontend Developer, adding new features and functionalities within the existing AngularJS codebase. Ensured smooth integration of new features without impacting existing workflows or system stability. Used a JSON server for local development and version control to speed up development and improve team collaboration. Leveraged Microsoft Azure cloud services to deploy the application, ensuring scalability, reliability, and adherence to security best practices. Collaborated closely with the team to translate business requirements into effective technical solutions aligned with customer objectives.

Value Delivered:

Maintained and enhanced a critical business application to support Metso Outotec's operational agility. Improved development efficiency and team collaboration through effective use of local development tools and cloud infrastructure. Supported scalable, secure deployment ensuring reliable application performance in a production environment.

Metsäverkko

Customer: Metsäverkko
Duration: Feb 2020 - Oct 2020
Roles: Senior Software Developer

AngularJS Azure DevOps Jira TypeScript Code optimizations CSS Agile Development

Developed a responsive and feature-rich Single Page Application (SPA) using AngularJS to support Metsäverkko's forestry management operations. The SPA delivers real-time data and complex workflows essential for daily business processes.

Role in the project - Senior Software Developer:

Customer Context:

Metsäverkko is a key player in Finland's forestry sector, specializing in digital solutions and infrastructure to support efficient forest management and logistics. Their applications serve large user bases requiring reliable and performant tools.

My Role and Responsibilities:

Served as a Full Stack Developer, driving both frontend and backend development tasks. Restructured stylesheets and optimized code bundling to improve the application's performance and maintainability. Led the implementation of new features, ensuring alignment with client requirements and project objectives.

Actively participated in Agile ceremonies, collaborating closely with a diverse team to ensure smooth delivery of project milestones.

Facilitated problem-solving and cross-team communication to resolve technical challenges efficiently.

Value Delivered:

Significantly enhanced application performance and user experience through code optimization.

Ensured timely delivery of key features by leading proactive development efforts within an Agile framework.

Strengthened team collaboration and project coordination, contributing to the overall success of the solution.

Lyse Support Tool

Customer: LYSE

Duration: Jun 2019 - Jan 2020

Roles: Software Developer

JavaScript

TypeScript

Angular 7

Node.js

Authentication & Authorisation

JWT - JSON Web Token

Developed the frontend of the Lyse Support Tool using Angular 7 and Material-UI, focusing on creating an intuitive and responsive interface for internal support teams. The application facilitates streamlined issue tracking and resolution.

Role in the project - Software Developer:

Customer Context:

Lyse is a major Norwegian energy and telecommunications company providing essential services such as power, fiber, and broadband to thousands of customers. Their internal support tools play a crucial role in maintaining efficient customer service and operations.

My Role and Responsibilities:

Worked as a Software Developer, designing UI components with AngularJS and styling using SCSS and Material-UI design library.

Configured the project environment with appropriate package managers for streamlined dependency management.

Implemented secure authentication on the frontend using JWT tokens to protect access and enhance security.

Value Delivered:

Delivered a responsive and visually consistent user interface that improved support team efficiency.

Strengthened frontend security through JWT-based authentication, ensuring protected access to sensitive internal tools.

Enhanced maintainability and scalability by applying best practices in frontend architecture and package management.

Lyse Application

Customer: LYSE

Duration: Sep 2019 - Dec 2019

Roles: Software Developer

UnixShell

Node.js

Angular 7

Material UI

Worked on enhancing the existing Lyse Support Tool frontend, built primarily with Angular 7+ and Material-UI, with some modules implemented as standalone JSP applications.

Role in the project - Software Developer:

Customer Context:

Lyse is a leading Norwegian energy and telecom company, providing critical infrastructure and support services to its customers. The Support Tool is an essential application used internally to manage customer service workflows efficiently.

My Role and Responsibilities:

Acted as a Software Developer, delivering updates and refinements at the template and module level based on evolving customer requirements.

Made frontend changes within AngularJS 7+ framework and contributed to JSP module updates and deployments.

Ensured alignment of UI/UX elements with customer expectations and functional needs.

Value Delivered:
Delivered timely and precise frontend updates that enhanced user experience and met client-specific demands.
Supported seamless application maintenance and modular deployment strategies, improving overall system flexibility.
Contributed to keeping the application up-to-date and responsive to business needs, enabling Lyse's internal teams to operate effectively.

Lyse Ubisecure templating

Customer: LYSE
Duration: Sep 2019 - Dec 2019
Roles: Software Developer

JavaScript Linux, Ubuntu UnixShell Node.js

Performed UI template updates for applications hosted on a Linux-based Ubisecure server, a platform used for identity and access management.

Role in the project - Software Developer:
Customer Context:
Lyse, a major Norwegian energy and telecom company, relies on robust internal tools for secure and efficient operations.

My Role and Responsibilities:
Worked as a Software Developer making UI changes directly in templates deployed on the Ubisecure environment.
Ensured compatibility and smooth operation within the Linux server infrastructure.

Value Delivered:
Enhanced user interface elements to improve usability and meet updated requirements.
Maintained system integrity while applying changes in a secure server environment, supporting Lyse's internal workflows effectively.

Data Analysis of Vehicle's CAN Data

Customer: Millisecond Oy
Duration: Aug 2018 - Apr 2019
Roles: Data Engineer

Azure SQL Database React Tableau Practitioner Microsoft Power BI Python Flask .NET Framework ETL
Data Engineering REST API PostgreSQL NoSQL MQTT (Message Queuing Telemetry Transport)
Data Visualization Machine Learning

Developed a comprehensive telemetry system to collect, process, and visualize real-time data from heavy-duty mining vehicles and Bluetooth/Wi-Fi sensors distributed across mining areas. The platform supports cloud-based processing, monitoring, and machine learning-driven analytics.

Role in the project - Data Engineer:
Customer Context:
Millisecond Oy is a Finnish startup innovating in smart mining technology, focusing on enhancing safety and operational efficiency in landmine zones through advanced telemetry and real-time data analytics.

My Role and Responsibilities:
Served as a Data Engineer, designing and maintaining robust data pipelines to ingest raw telemetry from vehicles and sensors.
Performed extensive data cleaning, deduplication, and transformation to ensure high-quality datasets for analysis.
Addressed missing data challenges using statistical and domain-specific techniques.
Exported processed data in multiple formats (CSV, JSON, Parquet) for visualization and ML use.

Collaborated with data scientists to prepare feature-rich datasets.
Developed backend services to manage and expose data securely via RESTful APIs.
Designed scalable data models and managed cloud storage/databases.
Facilitated reliable, secure communication between IoT devices and backend using message queues or MQTT protocols.
Built web dashboards and visualization tools using modern frontend frameworks.

Value Delivered:

Enabled real-time monitoring and analysis of critical mining operations, improving safety and efficiency.
Provided high-quality, structured data essential for advanced analytics and machine learning models.
Supported Millisecond Oy's goal of leveraging IoT and cloud technologies to revolutionize telemetry in hazardous environments.

Front end development

Customer: Millisecond Oy
Duration: Feb 2018 - Aug 2018
Roles: Software Developer

HTML5 JavaScript React ECMAScript- ES6/7 Redux Node.js

Customized a ReactJS-based dashboard template to fit the specific needs of a key client. The dashboard features dynamic graphs and tables for real-time data visualization and insights.

Role in the project - Software Developer:

Customer Context:

Millisecond Oy is a Finnish startup specializing in smart telemetry solutions, delivering advanced data visualization and monitoring tools for mining and industrial clients.

My Role and Responsibilities:

Acted as a Software Developer, tailoring an off-the-shelf ReactJS, Redux, and JavaScript template to meet client requirements.

Developed and integrated dashboard components including interactive graphs and data tables.

Ensured seamless state management using Redux to handle dynamic data updates and user interactions.

Value Delivered:

Provided a client-specific, user-friendly dashboard that enabled effective monitoring and decision-making.

Enhanced data presentation and usability, supporting the client's operational goals.

Accelerated delivery by leveraging and customizing existing templates rather than building from scratch.

Sport's Arena Web Portal Customisation

Customer: Unikie Oy
Duration: Aug 2017 - Dec 2017
Roles: Full Stack Developer

AngularJS Node.js PHP phpMyAdmin

Customized a Sports Arena web portal built with Angular 2, Node.js, and Laravel, designed to manage and deliver sports-related content and services to end users.

Role in the project - Full Stack Developer:

Customer Context:

Unikie Oy is a technology company specializing in software solutions for industries like automotive, telecom, and digital services, focusing on innovation and high-quality software delivery.

My Role and Responsibilities:

Served as a Full Stack Developer, working on both frontend and backend components.

Customized Angular 2 frontend features to improve user interaction and UI responsiveness.
Developed backend logic and APIs using Node.js and PHP (Laravel framework).
Managed database operations with phpMyAdmin, ensuring data integrity and efficient queries.

Value Delivered:
Enhanced portal functionality to better serve client-specific needs and user experience.
Streamlined data flow and backend performance through targeted customizations.
Supported timely project delivery and smooth integration of new features.

Data Analysis of polio data

Customer:

Duration:

Roles:

Micromerger

Nov 2011 - Aug 2012

Software Developer

Java SDK

Python

MS Excel

Pandas

SQL

Developed a data analysis system to process weekly polio vaccination data collected by field teams visiting homes nationwide. The data was used to generate dashboards and charts to monitor vaccination coverage and support decision-making.

Role in the project - Software Developer:

Customer Context:

Micromerger Pvt Ltd is a company based in Pakistan working in the healthcare data domain, supporting public health initiatives like polio eradication by analyzing field data collected by teams across the country.

My Role and Responsibilities:

Software Developer responsible for handling data processing and visualization tasks.

Utilized Java SDK to develop a standalone desktop application embedding key charts.

Employed Python, Pandas, and SQL for data cleaning, transformation, and analysis.

Created dashboards and visualizations in MS Excel for reporting and insights.

Value Delivered:

Enabled timely and accurate visualization of polio vaccination coverage data.

Provided actionable insights to support field teams and health officials in monitoring vaccination efforts.

Delivered a desktop application integrating critical charts for easy offline access.

FORMAL EDUCATION

2012 - 2015	Masters in Global IT Management (Work Informatics), University of Turku, Finland
2009	Bachelor in Software Engineering, International Islamic University, Islamabad, Pakistan
2018	Diploma in Big Data Analytics, Arcada University, Helsinki, Finland Big Data Specialization Learned the following concepts during this certification program of 01 year: . Data exploration . Data Analysis using python pandas libraries, open source tools like KNIME and gretl etc

- . Data visualisation: Python libraries, tableau, power BI etc
- . Machine Learning: supervised and unsupervised learning algorithms

WORKING METHODS AND TECHNOLOGY COMPETENCE

Technologies	PostgreSQL, MariaDB, MySQL, JavaScript, PHP, PL/SQL, UnixShell, Jira, Linux, Ubuntu, SQLite, T-SQL, Database Design, JSON, HTML5, ASP.NET, jQuery, Java SDK, MongoDB, NoSQL, Node.js, AngularJS, Cascading Style Sheets (CSS), GitHub, Gulp, Bower, TypeScript, Bootstrap, Agile Development, R programming language, Google Analytics, Redis, Docker Compose, Microsoft Power BI, Kubernetes, Redux, ECMAScript- ES6/7, Kotlin, Confluence, Firebase Realtime Database, ASP.NET Core, Vue.js, JWT - JSON Web Token, .NET Framework, React, React Native, Postman, Swagger, NPM, Azure SQL Database, REST API, Google Cloud Platform, Azure Functions, iOS Application Development, Headless CMS, Material UI, Git, GitOps, AWS, Blockchain, Contentful, SCSS, inRiver PIM, IAM, Express.js, Azure, Genesys, Cordova, Keycloak, Docker, Maven, ETL/ELT, Microsoft Fabric, AWS S3, Webpack, Salesforce Integrations, Flask, Pandas, MQTT (Message Queuing Telemetry Transport), Scala, Data Warehouse, PySpark, EventHouse, Apache Hadoop, Data Factory, Dataflow Gen2, KQL (Kustor Query Language), OneLake, Event Streams, Delta Lake, Spring Boot, Apache Airflow, S3 (Simple Storage Service)
Tools	Tableau, Confluence, Jenkins, Gradle Build Tool, Optimizely CMS, Jira, Visual Studio Code (VS Code), Android Studio, MS SQL Server

CERTIFICATIONS

May 2022	Microsoft Certified: Azure Developer Associate (AZ-204)
Sep 2020	Microsoft Certified: Azure Fundamentals
Jun 2023	Microsoft Certified: Azure Data Fundamentals
Aug 2023	AWS Certified Cloud Practitioner - Foundational
Apr 2015	ITIL® Foundation Certification - IT Service Management

COURSES

May 2025	Microsoft Fabrics Data Engineering
Sep 2016	The Data Scientist's Toolbox
Nov 2017	Machine Learning
Nov 2017	Knowledge Management and Big Data in Business

Jun 2025

Microsoft Azure DevOps

LANGUAGES

English

Native proficiency

Finnish

Limited working proficiency

WORK EXPERIENCE

2009 - 2010

Renaissance software house, Rawalpindi, Pakistan, Web Developer

2010 - 2011

Abt Associates Inc. – USAID Project, Islamabad, Pakistan, Web Master

2011 - 2012

MicroMerger (pvt) Ltd. Pakistan, Data Analyst

2014 - 2015

TURKU SCHOOL OF ECONOMICS, Researcher

2017 - 2017

Unikie Oy, Full Stack Developer

2018 - 2019

Millisecond Digital Oy, Software Developer

2019 - till now

Tietoevry, Senior Software Developer
