

GROW YOUR BUSINESS WITH US

Empowering Transformations

From data management and high-powered computing solutions to specialized staffing and training.

Engagement intent

The purpose of this proposal is to establish a practical, governed and supportable Business Central operating foundation. The focus is not limited to system configuration; it also includes stakeholder alignment, data readiness, workflow understanding, documentation, transition support and clear decision ownership.

Each customer implementation or Business Central instance is treated as a controlled delivery cycle, with scope, assumptions, commercials and support boundaries agreed before kickoff. The standard foundation implementation fee is AED 30,000 per customer implementation cycle, with AMC calculated at 20% of the agreed implementation cost.

AED 30,000 implementation cycle

Controlled change request process

AMC at 20% of implementation cost

Per instance clarity

Commercials are aligned to each customer implementation / BC instance, starting from AED 30,000 per agreed kickoff and implementation cycle.

Governed delivery

Discovery, configuration, testing, approvals and change requests are managed through a clear delivery rhythm and decision log.

Ongoing support

AMC support provides continuity after go-live, covering issue triage, minor guidance, release awareness and operational improvement planning.

Engagement financial model

The commercial model is designed as a repeatable Business Central customer implementation cycle. Each new customer Kickoff / implementation is treated as a separate chargeable engagement, with AMC applied after go-live to provide continuity and controlled support.

FOUNDATION IMPLEMENTATION

AED 30,000

Per customer implementation / Business Central kickoff cycle, based on agreed scope, readiness, standard configuration and handover.

ANNUAL MAINTENANCE CONTRACT

20%

AMC is calculated at 20% of the total agreed implementation cost and covers post go-live support within agreed service boundaries.

Commercial item	Basis	Typical coverage	Notes
BC Customer Implementation Cycle	AED 30,000 per implementation	Kickoff, scope confirmation, standard BC foundation configuration, data upload approach, validation support, user/security alignment, UAT support and handover.	Applies each time a new customer implementation / BC instance engagement is initiated.
AMC Support	20% of total implementation cost	Remote support, issue triage, user guidance, release awareness, minor advisory and operational continuity after go-live.	AMC scope, response expectations and support window to be agreed before activation.
Additional Entity / Company	Scoped separately	Additional setup for legal entities, posting groups, dimensions, users and relevant configuration.	Quoted where entity structure, statutory requirements or operating model differs from the agreed implementation baseline.
Integration Enablement	Per integration stream / agreed scope	Data flow mapping, field ownership, validation rules, import/export approach, test cycle and error handling model.	Third-party connector/licensing costs are excluded unless explicitly stated.
Reporting / Dashboard Pack	Scoped separately	KPI definition, dataset alignment, dashboard prototype and handover guidance.	Advanced data modelling or non-BC data consolidation may require separate discovery.
Change Requests / Customisation	Approved CR / scoped estimate	New requirements, process redesign, custom workflow, additional configuration or specialist discovery after kickoff.	No CR work proceeds without impact assessment, cost confirmation and written approval.

Repeatable implementation roadmap

01

Introduction & alignment

Confirm customer stakeholder route, AED 30,000 implementation cycle, scope boundary, required modules and decision ownership.

02

Discovery & scope lock

Review current process, data, integrations, risks, access and configuration dependencies.

03

Configuration & validation

Set up agreed foundation, prepare data upload route, validate workflows and support user testing.

04

Go-live & AMC

Support cutover, stabilisation, handover and transition into AMC at 20% of the implementation cost.

Delivery workplan and indicative effort

Stage	Indicative timing	Activities	Output
Kickoff & access readiness	Days 1-3	Stakeholder intro, access check, instance/environment confirmation, licensing assumptions and initial delivery calendar.	Kickoff pack, agreed contact route, working access and initial risk log.
Discovery & configuration blueprint	Week 1-2	Process review, configuration assumptions, master data, dimensions, users, workflows and integration touchpoints.	Signed scope baseline, configuration blueprint and implementation backlog.
Foundation configuration	Week 2-5	Core BC setup, company configuration, roles, data templates, posting setup, validation cycles and user walkthroughs.	Configured instance ready for structured testing and data loading.
Data upload & validation	Week 3-6	Template preparation, data import, sample reconciliation, exception tracking and user review.	Validated opening data position and issue/exception register.
UAT, training & handover	Week 5-8	User testing support, process notes, issue triage, admin guidance, operational handover and readiness review.	Go-live readiness checklist, support runbook and agreed hypercare route.
Hypercare & AMC transition	Post go-live	Stabilisation support, issue review, improvement backlog and monthly support cadence setup.	AMC support model activated with agreed service boundaries.

Included in the foundation engagement

Initial stakeholder alignment and delivery planning
Business Central instance/environment readiness review
Standard configuration based on agreed scope
Data upload approach and validation support
User/security role guidance
UAT support, handover notes and stabilisation planning

Handled through CR or separate discovery

Major process redesign after kickoff
Custom development, extensions or advanced workflows
Additional integrations not agreed at scope lock
Complex data cleansing or remediation
New modules, legal entities or locations added later
Specialist onsite workshops or extended documentation packs

AMC support options

Support tier	Coverage	Typical use	Commercial note
Essential AMC	Remote issue triage, guidance, monthly support review and minor operational queries.	Small teams needing continuity after go-live.	Included under AMC model calculated at 20% of total implementation cost, subject to agreed response window.
Growth AMC	Essential coverage plus improvement backlog, release awareness and configuration advisory.	Teams actively improving BC usage and reporting maturity.	AMC baseline plus separately agreed support allocation where additional improvement activity is required.
Strategic AMC	Growth coverage plus governance review, roadmap planning, stakeholder reporting and wider platform advisory.	Businesses treating BC as a strategic operational platform.	Strategic advisory can be added on top of AMC where roadmap, governance or reporting cadence is required.

Change request governance

Request raised

Impact assessed

Effort costed

Approval captured

Delivery scheduled

Any configuration, customisation, integration change or full discovery requirement identified after kickoff will be reviewed as a change request. Work will only proceed once the impact, cost and delivery timeline are agreed in writing.

Commercial assumptions

Fees exclude Microsoft licensing, third-party connector costs and external vendor charges.
The standard BC customer implementation / kickoff cycle is priced at AED 30,000 unless otherwise agreed in writing.
AMC is calculated at 20% of the total agreed implementation cost and activated after go-live / handover.
Pricing is based on agreed customer implementation scope, instance/entity assumptions and confirmed deliverables.
Client-side availability, data readiness and timely approvals are required to maintain delivery timelines.
Formal commercials will be finalised before agreement signature.

Travel and onsite engagement

Remote delivery is assumed unless onsite support is explicitly agreed.
Travel, accommodation and related expenses are charged separately at cost.
Any onsite workshop or travel requirement will be quoted and approved in advance.
Emergency or priority onsite requests may require separate scheduling and commercial approval.
